Dear Hiring Manager,

My name is Felipe Estrela, and I am a Software Engineering student and Full Stack Developer with a strong interest in building scalable, reliable, and business-oriented software solutions. I have hands-on experience working with modern web technologies such as Node.js, JavaScript, TypeScript, Next.js, React, and cloud-based infrastructures, as well as relational and non-relational databases.

In addition to my technical background, I am the Founder and CEO of MyGames, a digital marketplace designed to connect users who want to sell in-game items, accounts, and virtual currencies with buyers seeking secure and efficient transactions. In this role, I have been responsible for the full technical and strategic development of the platform, including system architecture, backend and frontend implementation, scalability planning, security considerations, and user experience optimization. This experience strengthened my ability to align technology with real business needs.

I am also the founder and developer of Lunar Bot, a Discord-based platform focused on selling digital products. The project reached over 35,000 users and supported more than 1,000 simultaneously active stores, providing me with valuable experience in building high-availability systems, handling large user bases, and developing product-driven solutions from concept to production.

I consider myself proactive, self-taught, and highly adaptable. I value clean code, performance, and continuous improvement, and I am always seeking opportunities to learn new technologies and apply them to solve complex problems efficiently. I am motivated to contribute my technical expertise and entrepreneurial mindset to a collaborative team while continuing to grow as a software engineer.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my skills and experience can add value to your team.

Sincerely,

Felipe Estrela

Software Engineering Student | Full Stack Developer
